

Cegeka and CODit announce a strategic partnership for application integration in healthcare.

Antwerp, Belgium -- February, 2010

Both companies have joined forces to provide a structured solution for data exchange between different systems in the health care industry, using Microsoft BizTalk Server complemented with the CODit product suite & Managed Services.

Cegeka with its 20 years of experience in the healthcare industry, and CODit with its 10 year of experience in the implementation of integration solutions, have -thanks to their own specific knowledge and experience- a unique offering for the hospital sector.

The IT departments of hospitals are faced with a huge challenge regarding the facilitation of an efficient, controllable and transparent data exchange.

Which are the challenges?

- a) Hospital IT departments struggle with managing and connecting complex environments & processes.
- b) The set-up of data streams between the different Application Isles and legacy systems represents a great risk.
- c) Clinical and logistic processes have become more and more intertwined.
- d) The IT departments have little control over the existing data streams, which makes it hard to supervise the automated data-exchange streams, and to correct them where necessary.
- e) To adapt existing data streams and to implement new data streams is difficult, risky and expensive.

Cegeka – CODit can offer an **end-to-end solution**, from process modeling – over the collection and central storage of the specifications - to implementation and operational management.

Our unique and **pre-packaged** offer consists of an **Open ESB platform** complemented with **specific functional tools**, such as HL7 and Carenet accelerators, and technical monitoring tools which enables the client to streamline and manage the internal hospital data stream with external data streams.

CODit – Your Integration Partner

CODit, founded in 1999, is an innovating IT consultancy company with its headquarters in Antwerp, which focuses on integration solutions using Microsoft technologies. CODit has built up a large experience and expertise in all types of integration projects, such as B2B, EAI, ESB, SOA, BPM & BPA.

CODit's experience and expertise helps their clients to manage and reduce the risks and costs needed for the implementation of integration projects within their organization.

With the CODit Collaborative Integration platform (CIP) CODit provides a closed loop approach for integration projects which enables the client to react faster and more efficiently to changing market circumstances.

Cegeka – One-stop shop for Health Care Solutions

On the Belgian market, Cegeka has been developing already since 1995 information systems which support different processes in the (health)care industry (hospitals, electronic patient files, electronic medication management, nurse schedule, electronic management of meals and clinical labs). In The Netherlands we focus ourselves via DataBalk on an integrated product- and service offering for the care sector (home care, care institutions, nursing homes and disabled care). At this moment over 150 care institutions and clinical labs in Europe use our software and services.

Our offer is based on joining the 'best of breed' of partners, technologies and solutions. Starting from our basis - the electronic medical file -, we have developed a portal concept, in which the patient and his therapy are central.
